- ▶ HD video recording

ADDITIONAL FEATURES

Pre-record mode

With continuous recording of up to 40 photos per second, a maximum of 39 photos can be saved in the camera's buffer memory — even before the shutter release button is pressed. The 40th image then corresponds to the photo that was taken when the shutter release button was pressed.

26 mm wide-angle lens

The combination of 26 mm wide-angle lens* and 20x optical zoom makes the EX-FH20 the perfect companion for every occasion, providing great scope to capture your loved ones, the most beautiful sights or a romantic sunset.

High-speed anti shake and high-speed night shot

The two BEST SHOT motif programmes can combine several photos from a photo sequence, joining the positions of the motif to create an optimal photo.

Flash Continuous Shutter

With the Flash Continuous Shutter on the EX-FH20, it is possible to take up to ten consecutive photos with flash, with a speed of up to five photos per second. So you can guarantee great photos in poor light conditions!

Multi-motion function

The BEST SHOT function Multi-Motion-Image enables you to capture a movement sequence in just one single photo.

Face Detection Function

The face detection function recognises faces and applies the best possible setting automatically.

The High Speed EXILIM EX-FH20 is available to buy from specialist dealers, shopping centres, electrical goods stores and all good shops.

*equivalent to 35 mm film
